Over the years, the combined efforts of the NRC, FEMA, nuclear power plant operators, State and local officials, as well as thousands of volunteers and first responders (such as police, firefighters, and medical response personnel), have produced comprehensive emergency preparedness programs that assure the adequate protection of the public in the event of a radiological emergency.

A field-tested guide to surviving a nuclear attack, written by a revered civil defense expert. This edition of Cresson H. Kearny ' s iconic Nuclear War Survival Skills (originally published in 1979), updated by Kearny himself in 1987 and again in 2001, offers expert advice for ensuring your family ' s safety should the worst come to pass. Chock-full of practical instructions and preventative measures, Nuclear War Survival Skills is based on years of meticulous scientific research conducted by Oak Ridge National Laboratory. Featuring a new introduction by ex-Navy SEAL Don Mann, this book also includes: instructions for six different fallout shelters, myths and facts about the dangers of nuclear weapons, tips for maintaining an adequate food and water supply, a foreword by " the father of the hydrogen bomb, " physicist Dr. Edward Teller, and an " About the Author " note by Eugene P. Wigner, physicist and Nobel Laureate. Written at a time when global tensions were at their peak, Nuclear War Survival Skills remains relevant in the dangerous age in which we now live.

Disasters often strike without warning and leave a trail of destruction in their wake. Yet armed with the right tools and information, survivors can fend for themselves and get through even the toughest circumstances. Matthew Stein's *When Disaster Strikes* provides a thorough, practical guide for how to prepare for and react in many of life's most unpredictable scenarios. In this disaster-preparedness manual, he outlines the materials you'll need—from food and water, to shelter and energy, to first-aid and survival skills—to help you safely live through the worst. *When Disaster Strikes* covers how to find and store food, water, and clothing, as well as the basics of installing back-up power and lights. You'll learn how to gather and sterilize water, build a fire, treat injuries in an emergency, and use alternative medical sources when conventional ones are unavailable. Stein instructs you on the smartest responses to natural disasters—such as fires, earthquakes, hurricanes and floods—how to keep warm during winter storms, even how to protect yourself from attack or other dangerous situations. With this comprehensive guide in hand, you can be sure to respond quickly, correctly, and confidently when a crisis threatens.

"Recommendations of the National Council on Radiation Protection and Measurements."

“ A kind of apocalyptic Super Size Me ” (The Guardian) that is both “ page turning and thoughtful ” (Financial Times) about “ prepper ” communities around the world that are building fortresses against an array of threats. Currently, 3.7 million Americans call themselves preppers. Millions more prep without knowing it. Bradley Garrett, who began writing this book years before the 2020 Covid-19 pandemic, argues that prepping is a rational response to global, social, and political systems that are failing to produce credible narratives of continued stability. Left with a sense of foreboding fueled by disease outbreaks, increasing government dysfunctionality, eroding critical infrastructure, nuclear brinkmanship, and an accelerating climate crisis, people all over the world are responding predictably—by hunkering down. Garrett traveled across four continents to meet those who are constructing panic rooms, building underground backyard survival chambers, stockpiling supplies, preparing go bags, hiding inflatable rafts, rigging mobile “ bugout ” vehicles, and burrowing deep into the earth. He has returned with “ a big-thinking, deep-diving, page-turning study of fear, privilege, and apocalypse ” (Robert Macfarlane, author of *Underland*) from the frontlines of the way we live now: an illuminating reflection on our age of disquiet and dread that brings our times into new and sharper focus. With scenes that are “ fascinating, amusing, crazy, chilling, and surreally topical ” (Douglas Preston, author of *Lost City of the Monkey God*), Garrett shows that the bunker is all around us: in malls, airports, gated communities, the vehicles we drive. Most of all, he reveals, it ’ s in our minds.

A solar storm has just hit the world causing a EMP event. A emergency manager visiting Atlanta GA must find his way back home after this electromagnetic pulse has stranded him away from his vehicle and his beloved "bug out bag." With 180 miles to go to his destination, David must let his street smarts and survival skills kick in as food and water becomes scarce and societal breakdown proceeds at an unrelenting pace. An interesting and often funny cast of characters from the Deep South helps the displaced Prepper on his way, as he shares his knowledge of how to make do with common items in order to live another day. Ultimately, he acquires an old tractor and heads for home on a car-littered interstate. This is book one of the Prepper Trilogy.

Now a 6-part mini-series called *Why the Rest of Us Die* airing on VICE TV! The shocking truth about the government ’ s secret plans to survive a catastrophic attack on US soil—even if the rest of us die—is “ a frightening eye-opener ” (Kirkus Reviews) that spans the dawn of the nuclear age to today, and "contains everything one could possibly want to know" (The Wall Street Journal). Every day in Washington, DC, the blue-and-gold first Helicopter Squadron, codenamed “ MUSSEL, ” flies over the Potomac River. As obvious as the Presidential motorcade, most people assume the squadron is a travel perk for VIPs. They ’ re only half right: while the helicopters do provide transport, the unit exists to evacuate high-ranking officials in the event of a terrorist or nuclear attack on the capital. In the event of an attack, select officials would be whisked by helicopters to a ring of secret bunkers around Washington, even as ordinary citizens were left to fend for themselves. “ In exploring the incredible lengths (and depths) that successive administrations have gone to in planning for the aftermath of a nuclear assault, Graff deftly weaves a tale of secrecy and paranoia ” (The New York Times Book Review) with details "that read like they've been ripped from the pages of a pulp spy novel" (Vice). For more than sixty years, the US government has been developing secret Doomsday strategies to protect itself, and the multibillion-dollar Continuity of Government (COG) program takes numerous forms—from its potential to evacuate the Liberty Bell from Philadelphia to the plans to launch nuclear missiles from a Boeing-747 jet flying high over Nebraska. Garrett M. Graff sheds light on the inner workings of the 650-acre compound, called Raven Rock, just miles from Camp David, as well as dozens of other bunkers the government built for its top leaders during the Cold War, from the White House lawn to Cheyenne Mountain in Colorado to Palm Beach, Florida, and the secret plans that would have kicked in after a Cold War nuclear attack to round up foreigners and dissidents and nationalize industries. Equal parts a presidential, military, and cultural history, *Raven Rock* tracks the evolution of the government plan and the threats of global war from the dawn of the nuclear era through the War on Terror.

This important book by one of our leading experts on disaster preparedness offers a compelling narrative about our nation ’ s inability to properly plan for large-scale disasters and proposes changes that can still be made to assure the safety of its citizens. Five years after 9/11 and one year after Hurricane Katrina, it is painfully clear that the government ’ s emergency response capacity is plagued by incompetence and a paralyzing bureaucracy. Irwin Redlener, who founded and directs the National Center for Disaster Preparedness, brings his years of experience with disasters and health care crises, national and international, to an incisive analysis of why our health care system, our infrastructure, and our overall approach to disaster readiness have left the nation vulnerable, virtually unable to respond effectively to catastrophic events. He has had frank, and sometimes shocking, conversations about the failure of systems during and after disasters with a broad spectrum of people—from hospital workers and FEMA officials to Washington policy makers and military leaders. And he also analyzes the role of nongovernmental organizations, such as the American Red Cross in the aftermath of Katrina. Redlener points out how a government with a track record of over-the-top cronyism and a stunning disregard for accountability has spent billions on “ random acts of preparedness, ” with very little to show for it—other than an ever-growing bureaucracy. As a doctor, Redlener is especially concerned about America ’ s increasingly dysfunctional and expensive health care system, incapable of handling a large-scale public health emergency, such as pandemic flu or widespread bioterrorism. And he also looks at the serious problem of a disengaged, uninformed citizenry—one of the most important obstacles to assuring optimal readiness for any major crisis. Redlener describes five natural and man-made disaster scenarios as a way to imagine what we might face, what our current systems would and would not prepare us for, and what would constitute optimal planning—for government and the public—in each situation. To see what could be learned from others, he points up some of the more effective ways countries in Europe, Asia, and the Middle East have dealt with various disasters. And he concludes with a real prescription: a nine-point proposal for how America can be better prepared as well as an addendum of what citizens themselves can do. An essential book for our time, *Americans at Risk* is a devastating and realistic account of

where we stand today.

The word ‘prepper’ seems to have burst onto the scene within the last 10 years, and has increasingly become associated with “fringe” extremists. They have been labeled by some as “domestic terrorists.” But is prepping a new phenomenon? Or is it a manifestation of a growing collective psyche that has learned, from traumatic events throughout our history, that preparedness is critical to human survival? For new preppers who think the worst is yet to come, this book offers a walk through history that shows the worst has been here before. For those who wonder why so many people are concerned about being prepared, this book will show that when the worst has made an appearance, those who weathered it best were those who were prepared. For those already familiar with history’s worst who think, “THAT will never happen again!”—this book offers a reminder of the Wall Street adage: “Past performance is no guarantee of future results.” For those who wonder what a prepper is, this book offers a look at what they used to be—and what they are today.
