unctiona Function: F of x it is! Functional notation is a way of representing functions algebraically. Function notation makes it easier to recognize the independent and dependent variables in an equation. The function $f(x)$ is read as "f of x" and indicates that x is the independent variable. Consider the equation $c = 8s + 15$, where the independent variable s represents the number of shirts ordered and the dependent variable c represents the cost of the order.

Our equation now looks like: $50 + 25(4) =$ the total or $f(x)$. We could set up a table listing the inputs and outputs. The inputs would be 1, 2, 3, 4, 5, because those are some of the possible number of hours Katie could be zip lining. The corresponding outputs are 75, 100, 125, 150, 175 because they are the possible total prices.

Rewrite each function using function notation. 1. Rewrite the function $y = 3x + 8$ using function notation so that the dependent quantity, defined as f , is a function of the independent quantity x . 2. Rewrite the function $y = 3x^2 + 6x + 1$ using function notation so that the dependent quantity, defined as C , is a function of the independent quantity x . 3.

Max went to the gas station and saw that the gas price is \$3 per gallon. Use function notation to write an equation to see how much x gallons cost. Answer $G(x) = 3x$ $G(x)$ stands for the total cost for x gallons. x represents the number of gallons that Max buys. The "3" shows that each gallon of gas cost \$3.

Usually a function is represented by a mathematical expression. * Don't confuse $f(x)$ with multiplication! The entire symbol $f(x)$ represents a function, its input, and its output. It is not the same as an algebraic expression. The notation $f(x)$ is read "f at x " or "f of x ". FUNCTION NOTATION Notation, such as $f(x)$, is used to
