Read Book Javascript Patterns

In JavaScript, the Module pattern is used to further emulate the concept of classes in such a way that we're able to include both public/private methods and variables inside a single object, thus shielding particular parts from the global scope. What this results in is a reduction in the likelihood of our

Regular expressions are patterns used

Read Book Javascript Patterns

to match character combinations in strings. In JavaScript, regular expressions are also objects. These patterns are used with the `exec ()` and `test ()` methods of `RegExp`, and with the `match ()`, `matchAll ()`, `replace ()`, `replaceAll ()`, `search ()`, and `split ()` methods of `String`.

The Loader Pattern constructs a URL with date and time stamp at the end so that the file will not be cached. It sets up jQuery as a dependency on the loader file, then executes a function in the loader. This ensures your custom JavaScript will load after jQuery finishes loading.
