This title offers the building services industry a structured guide to their preparation. It lists the cost benefits resulting from a properly-prepared manual, and how they can be achieved. The guide is divided into three parts - 1) considers the content and format of O and M manuals, 2) examines the conditions and procedures for obtaining manuals of a satisfactory standard, and 3) examines updating procedures and their importance. Four appendices treat maintenance labour resource options, provides a check list for building engineering services, offers examples of the minimum requirements for plans and drawings in an O and M manual, and provides a list of specialist organisations for the preparation of O and M manuals.

A complete reference that features a wealth of proven maintenance methods that can reduce energy use in any type of building. Provided are numerous forms and maintenance procedures for reducing energy use, improving system performance, and cutting total maintenance costs.

Public agencies, private corporations, nonprofit institutions, and other organizations regularly invest millions of dollars in acquiring buildings and other constructed facilities to support their lines of business. For this investment, the owner receives a complex structure composed of hundreds of separate but interrelated components, including roofs, walls, foundations, electrical, plumbing, heating, air conditioning, ventilation, fire, communication, safety, and architectural systems. These components and systems must all be maintained and repaired to optimize the facility's performance throughout its service life and to provide a safe, healthy, and productive environment for its users and occupants. Linking the Construction Industry: Electronic Operation and Maintenance Manuals is a summary of a workshop that was held at the National Academy of Sciences in Washington, D.C., on October 13, 1999. The workshop, planned and organized by the Federal Facilities Council and the National Institute of Building Sciences, brought together an invited audience of building industry stakeholders, including owners and operators from federal agencies and other organizations, building component and system manufacturers, publishers of building product data and maintenance manuals, and CMMS software developers to revisit the issue of electronic operation and maintenance manuals.

This manual has been prepared to serve as a guide for the operation and maintenance of the Lutheran Hospital Bicycle Trail Segment. Operations and maintenance instructions for the major features of the project are presented. This manual has been written for project and management personnel familiar with the project and does not contain detailed information which is common to site personnel or which is presented in other existing manuals or regulations. The intent of the operating instructions is to provide information which allows orderly and efficient use of the constructed features. The intent of the maintenance instructions is to present preventative maintenance information consisting of systematic inspections and subsequent corrective actions which should ensure long-term utilization of equipment and features. A timely preventative maintenance program reduces and virtually eliminates breakdown of essential equipment and prevents major damage to constructed features by early corrective action.
