We can use permutations and combinations to help us answer more complex probability questions. ... We could either compute $10 \times 9 \times 8 \times 7$, or notice that this is the same as the permutation $10 P 4 = 5040$. The probability of no repeated digits is the number of 4 digit PINs with no repeated digits divided by the total number of 4 digit PINs ...

Combinations: 7C_3 • In our list of 210 sets of 3 professors, with order mattering, each set of three profs is counted $3! = 6$ times. The number of distinct combinations of 3 professors is $\frac{7 \cdot 6 \cdot 5}{3 \cdot 2 \cdot 1} = \frac{7 \cdot 6 \cdot 5}{6} = 7 \cdot 5 = 35$. 7C_3 is the number combinations of 3 objects chosen from a set of 7. “Of seven ...

Combinations and Permutations
What's the Difference? In English
we use the word "combination"
loosely, without thinking if the
order of things is important. In
other words: "My fruit salad is a
combination of apples, grapes
and bananas" We don't care what
order the fruits are in, they could
also be "bananas, grapes and
apples" or "grapes, apples and
bananas", its the same fruit salad.

Two of the main ways to count these r objects from n elements are called permutations and combinations. These concepts are closely related to one another and easily confused.

Permutations and combinations, the various ways in which objects from a set may be selected, generally without replacement, to form subsets. This selection of subsets is called a permutation when the order of selection is a factor, a combination when order is not a factor.
