No. Steel doors are
comprised of either a

polyurethane or

polystyrene core with a

steel skin over the top. A

solid steel door would be

prohibitively heavy and

would most likely tear

out the hinges. Steel

between 16 and 24 gauge

is used for the skin of the

door. A wood frame,

Read Book

Solid Core

called a stile, surrounds the perimeter of the door. None of the polyurethane or polystyrene is visible on the edges of the door.
