The Marquis de Condorcet, a French philosopher, mathematician and political scientist, was one of the founders of the mathematical theory of voting. He had studied under the renowned mathematician d’Alembert and he wrote several books on mathematics. He discovered a counter-intuitive result now called Condorcet’s paradox.

The mathematical issue here is the assignment of some quantitative measure of “power” in situations where people, voting yes or no on a measure, do not necessarily have one vote each. For a simple example, suppose that there are three voters (call them A, B and C) with 3, 2 and 1 votes, respectively; to pass a measure, 4 “yes” votes are necessary.

The exposition opens with a sketch of the mathematics behind the various methods used in conducting elections. The reader is lead to a comprehensive picture of the theoretical background of mathematics and elections through an analysis of Condorcet’s Principle and Arrow’s Theorem of conditions in electoral fairness. Further detailed discussion of various related topics include: methods of manipulating the outcome of an election, amendments, and voting on small committees.

Formally, if  $T(C)$  denotes the set of total orderings of  $S$  then a voting system is a function  $F:T(C)^n \rightarrow T(C)$ , where  $n$  is the number of voters. In the case of two candidates, May’s theorem (1952) provides some good news. Consider a voting system that satisfies the following sensible conditions:

But does voting mean that the views of the majority are truly represented when it can be shown (mathematically) that all voting systems have flaws? In this talk we use mathematics to look at these flaws and answer associated questions (eg. voting trends and gerrymandering).

The transfer value is the number of surplus votes from the person whose votes are being transferred, divided by the total number of that person's votes. . The transfer value is calculated as a decimal proportion of the candidate's total vote: transfer value = number of surplus votes ÷ total number of votes.
